

Did you know the climate solutions is already known to Government.

- to invest in carbon farming / regenerative agriculture is forecast to create 21,000 jobs and will add \$28 billion to the Australian economy.

- This entire scene to the horizon is to be carved up by 75m wide roads and 'green renewable' industrial turbines

- Did you know that the subsidized "green renewable energy" industry is replacing and destroying pristine habitats and farms?
- Killing wildlife and destroying whole eco-systems as we know it today.
- Did you know that there will be more mining, fossil fuels, rare earths needed for this toxic 'green renewable Industry'?
- We've just found out about a few, as there has been no public or community consultation
- Proposal –is awaiting approval from State Government - Chalumbin is untouched wilderness in the Atherton Tablelands that is going to be developed for 'green renewable' industrial wind turbines.
- The area size is 78,584 acres
- This is 93 times bigger than the size of Fitzroy Island!
- Close to Tully Falls, and adjoins Bush Heritage owned Yourka Station.

Is this the future for our remaining remnant forests? Emerald Heights was once pristine habitat.

The subsidization of this 'green renewable industry', or investment in this industry is unethical, and a national disgrace.

Yellow Bellied gliders live here and need continuous canopy cover to glide through the canopy.

The Critically Endangered Red Goshawk lives here

Will you support Farmers Network to do whatever it takes to protect the wilderness and farms that are left.

Any investment that replaces our habitats, farms, and vegetation with this shocker would be unethical. Instead invest in the climate solution - tree & soil carbon farming

Would you STOP THIS environmental catastrophe before it's too late?

California's new solar power plant is actually a death ray that's incinerating birds mid-flight
By Sebastian Anthony on August 20, 2014 at 9:35 am

- What spans 1,600 hectares, cost \$2.2 billion to build, and potentially fries hundreds of thousands of birds per year?
- Wildlife officials are concerned that this concentrated solar power plant, and others like it, could turn into "mega-trap" that decimates the ecosystem — first attracting insects, and then attracting birds that eat insects.

This industry is extractive kills wildlife and whole eco-systems. It destroys the soil, the ecology, the climate, and water cycle. No compensation to traditional owners will ever compensate for destroying cultural heritage future nor Australians who put a high value on habitat, and lost future opportunities for eco tourism and future farming.

"SEGS" Solar Site

Is this the future for our remaining farms & remnant forests?

Left - Mirrors Collapse, and due to the radioactive waste floating around with the wind, will be too toxic to grow food, destroying all future opportunities in farming or eco-tourism

The subsidization of the 'green renewable industry', or investment in this industry would be unethical, and a National Disgrace.

Curraghmore Station, Cape York, was a working cattle station with campsites beside the McLeod and Mitchell Rivers - it is abundant with birdlife, insects and mammals near Cairns.

Approved by the Mareeba Shire Council, This Proposal sits with State Government - Was a working farm -Savannah Woodland on the McLeod River, Cape York is pristine habitat adjoins the Mitchell River & AWC Brookland Wildlife Sanctuary
